Contents of Volume 110

Number 1, May 1994

LETTERS TO THE EDITOR

A New Route for the Synthesis of Tungsten Oxide Bronzes Y. T. Zhu and A. Manthiram 187

Rigid-Disordered Models for Inorganic Structures: The Case of Zirconia Nanopowders Laura E. Depero and Pierluca Levrangi 190

Iodine Intercalation in $Bi_2Sr_2Y_{0.5}Ca_{0.5}Cu_2O_{8+\delta}$: Evidence of Hole Transfer from Iodine to Copper–Oxygen Sheets M. A. Subramanian 193

HREM on Lu_2NiBC_2, a Phase Related to Superconducting $LuNi_2B_2C$ H. W. Zandbergen, R. J. Cava, J. J. Krajewski, and W. F. Peck, Jr. 196

REGULAR ARTICLES

$Rb_4Al_2Nb_{35}O_{70}$: A New Reduced Niobate with Isolated Nb_6 Octahedral Clusters Margret J. Geselbracht and Angelica M. Stacy 1

Variable Electrical Properties in Composites: Application to Vanadium Dioxide Pigments in a Polyethylene Host Carole Alfred-Duplan, Jean Musso, Jean-Raymond Gavarri, and Claude Cesari 6

Synthesis, Crystal Structure, and Electronic Structure of $In_2Li_2Nb_6Cl_{18}$ Abdessadek Lachgar and H.-Jürgen Meyer 15

Temperature-Dependent Structural Properties of *p*-Diiodobenzene: Neutron Diffraction and High-Resolution Solid State ^{13}C NMR Investigations Xavier Alcobé, Eugènia Estop, Abil E. Aliev, Kenneth D. M. Harris, Juan Rodríguez-Carvajal, and Jordi Rius 20

Oxygen Nonstoichiometry and Its Effect on the Structure of $LaNiO_3$ Soma Rakshit and P. S. Gopalakrishnan 28

Preparation and Characterization of New 1–2–1–2 Compounds $MA_2RECu_2O_{8-\delta}$ and $Nb_{1-x}Ru_xSr_2RECu_2O_{8-\delta}$ (M = Nb or Ta, A = Ba or Sr, and RE = Pr or Sm) B. Hellebrand, X. Z. Wang, and P. L. Steger 32

Optical Characterization of Lead Monoxide Films Grown by Laser-Assisted Deposition M. Baleva and V. Tuncheva 36

A Trivalent Vanadium Monophosphate with a Tunnel Structure: $Cd_3V_4(PO_4)_6$ S. Boudin, A. Grandin, M. M. Borel, A. Leclaire, and B. Raveau 43

Solid State Equilibria in the Ba–Cu–O System G. F. Voronin and S. A. Degterov 50

Chemical Bonding in Stoichiometric and Substoichiometric Vanadium Nitride Ľ. Benco 58

Tetrahedral Coordination of Mn(IV) by Oxygen in Manganese Sillenite $Bi_{12}MnO_{20}$ U. Delicat, S. F. Radaev, M. Trömel, P. Behrens, Y. F. Kargin, and A. A. Mar'in 66

Formation of Defected Cadmium Ferrite during Hydrothermal Storage of Cadmium–Iron Hydroxides W. Wolski, E. Wolska, and J. Kaczmarek 70

New Defective Brannerite-Type Vanadates. I. Synthesis and Study of $Mn_{1-x-y}\phi_xNa_yV_{2-2x-y}Mo_{2x+y}O_6$ Solid Solutions Bogna Masłowska and Jacek Ziółkowski 74

Description du Système Ternaire Ag–As–Te Rolande Ollitrault-Fichet, Jacques Rivet, Jean Flahaut, et Charbel El Kfouri 80

Infrared, Single Crystal Raman, and SERS Spectra of $CH_3NH_3NaSeO_4 \cdot 6X_2O$ and $NaNH_4SeO_4 \cdot 2X_2O$ (X = H,D) Daizy Philip, G. Aruldhas, T. Osaka, and A. Miyazaki 92

The Defect Chemistry of $LaMnO_{3\pm\delta}$ 2. Structural Aspects of $LaMnO_{3+\delta}$ J. A. M. Van Roosmalen, E. H. P. Cordfunke, R. B. Helmholdt, and H. W. Zandbergen 100

3 827HI XL 1479
12/94 31249-203

The Defect Chemistry of $LaMnO_{3\pm\delta}$ 3. The Density of $(La,A)MnO_{3+\delta}$ (A = Ca, Sr, Ba) J. A. M. Van Roosmalen and E. H. P. Cordfunke 106

The Defect Chemistry of $LaMnO_{3\pm\delta}$ 4. Defect Model for $LaMnO_{3+\delta}$ J. A. M. van Roosmalen and E. H. P. Cordfunke 109

The Defect Chemistry of $LaMnO_{3\pm\delta}$ 5. Thermodynamics J. A. M. van Roosmalen and E. H. P. Cordfunke 113

Magnetic Susceptibility and Electron Paramagnetic Resonance Study of KUO_3 with Cubic Perovskite Structure Yukio Hinatsu 118

The Semiconductor-to-Metal Transition in Question in $La_{2-x}NiO_{4+\delta}$ ($\delta > 0$ or $\delta < 0$) J. M. Bassat, P. Odier, and J. P. Loup 124

Mechanochemical Reduction of V_2O_5 H. Yang and P. G. McCormick 136

A New "123" Family: $LnBa_2Fe_3O_z$. III. Ln = Gd E. García-González, M. Parras, J. M. González-Calbet, and M. Vallet-Regí 142

Synthesis and Crystal Structure of Ramsdellite-Type $Li_{0.5}TiO_2$ J. Akimoto, Y. Gotoh, M. Sohma, K. Kawaguchi, Y. Oosawa, and H. Takei 150

Synthesis of the New Quaternary Sulfides $K_2Y_4Sn_2S_{11}$ and $BaLnAgS_3$ (Ln = Er, Y, Gd) and the Structures of $K_2Y_4Sn_2S_{11}$ and $BaErAgS_3$ Ping Wu and James A. Ibers 156

Synthesis and Neutron Diffraction Study of Na_3WN_3 and Na_3MoN_3 P. E. Rauch, F. J. DiSalvo, N. E. Brese, D. E. Partin, and M. O'Keeffe 162

Two Structures of $Ag_{2-x}V_4O_{11}$, Determined by High Resolution Electron Microscopy H. W. Zandbergen, A. M. Crespi, P. M. Skarstad, and J. F. Vente 167

Orthorhombic–Tetragonal and Semiconductor–Metal Transitions in the $La_{1-x}Sr_xRhO_3$ System T. A. Mary and U. V. Varadaraju 176

Chemical Preparation, Structural Investigation, and Thermal Behavior of a New Cyclohexaphosphate: $Zn_2Cs_2P_6O_{18} \cdot 8H_2O$ S. Abid, M. Rzaigui, and M. T. Averbuch-Pouchot 180

BRIEF COMMUNICATION

Effect of Angular Forces on the Phonons in Defect Chalcopyrite $CdGa_2S_4$ H. C. Gupta 185

Number 2, June 1994

LETTERS TO THE EDITOR

MSn and $MSnO_3$ (M = Ca, Sr, Ba): New Examples of Oxygen-Stuffed Alloys L. A. Martinez-Cruz, A. Ramos-Gallardo, and A. Vegas 397

Luminescence Quenching between Ce^{3+} and Eu^{3+} in LaB_3O_6 Z. Pei and G. Blasse 399

REGULAR ARTICLES

Infrared and Raman Spectroscopic Studies of ZrO_2 Polymorphs Doped with Y_2O_3 or CeO_2 T. Hirata, E. Asari, and M. Kitajima 201

Low-Temperature Electronic Properties of the $La_{n+1}Ni_nO_{3n+1}$ (n = 2, 3, and ∞) System: Evidence for a Crossover from Fluctuating-Valence to Fermi-Liquid-like Behavior K. Sreedhar, M. McElfresh, D. Perry, D. Kim, P. Metcalf, and J. M. Honig 208

Phase Relationship and Lithium Deintercalation in Lithium Nickel Oxides R. Kanno, H. Kubo, Y. Kawamoto, T. Kamiyama, F. Izumi, Y. Takeda, and M. Takano 216

Synthesis and Crystal Structure of a New Mixed Orthovanadate–Pyrovanadate Series: $MBa_2V_3O_{11}$ or $MBa_2V_2PO_{11}$ with M = Bi, In, or a Rare Earth Jinfan Huang, Qiuyi Gu, and Arthur W. Sleight 226

Single Crystal Structure, Magnetic Properties, and Electronic Structure of $Tl_xCr_5S_8$ (x = 1.0 and 0.7) W. Bensch, E. Wörner, M. Muhler, and U. Ruschewitz 234

Structure of γ-Li_3AsO_4 by High Temperature Powder Neutron Diffraction I. Abrahams, P. G. Bruce, W. I. F. David, and A. R. West 243

Emission Color Tuning of Green Emitting ZnS-Based CRT Phosphors M. Bredol, J. Merikhi, I. Köhler, H. Bechtel, and W. Czarnojan 250

The Phosphoniobate $RbNb_2PO_8$: An Ordered Substitution of PO_4 Tetrahedra for NbO_6 Octahedra in the HTB Structure A. Leclaire, M. M. Borel, A. Grandin, and B. Raveau 256

An X-Ray Study of the Polymorphism in Thallium Monosulfide: The Structure of Two Tetragonal Forms S. Kashida and K. Nakamura 264

Preparation and Characterization of Iron Manganese Carbide by Reaction of the Oxides and Carbon in Nitrogen Yunchang Zhang and Donald M. Schleich 270

Syntheses, Structures, and Characterization of 5-Layer $BaVO_{3-x}$ (x = 0.2, 0.1, 0.0) Guo Liu and J. E. Greedan 274

β-$BaV_2(P_2O_7)_2$: A New Polymorph of Barium Vanadium (III) Pyrophosphate Characterized by Intersecting Tunnels Shiou-Jyh Hwu, Richard I. Carroll, and Deborah L. Serra 290

Microstructural Characterization of the $LaNiO_{3-y}$ System M. J. Sayagués, M. Vallet-Regí, A. Caneiro, and J. M. González-Calbet 295

Hydrothermal Syntheses, Structures, and Properties of Two New Potassium Vanadium Phosphates: $K_3(VO)(V_2O_3)(PO_4)_2(HPO_4)$ and $K_3(VO)(HV_2O_3)(PO_4)_2(HPO_4)$ J. T. Vaughey, William T. A. Harrison, and Allan J. Jacobson 305

Solid State Dynamic Properties of Tetrakis(trimethylsilyl)methane: High-Resolution Solid State ^{13}C and ^{29}Si NMR Investigations Abil E. Aliev, Kenneth D. M. Harris, David C. Apperley, and Robin K. Harris 314

Antiferromagnetic Ordering and Structural Characterization of the Brown Colored R_2BaCoO_5 Oxides (R = Rare Earth) J. Hernández-Velasco, A. Salinas-Sánchez, and R. Sáez-Puche 321

New Quaternary Chalcogenides $BaLnMQ_3$ (Ln = Rare Earth; M = Cu, Ag; Q = S, Se). I. Structures and Grinding-Induced Phase Transition in $BaLaCuQ_3$ Amy E. Christuk, Ping Wu, and James A. Ibers 330

New Quaternary Chalcogenides $BaLnMQ_3$ (Ln = Rare Earth or Sc; M = Cu, Ag; Q = S, Se). II. Structure and Property Variation vs Rare-Earth Element Ping Wu, Amy E. Christuk, and James A. Ibers 337

Preparation of Fine Particle $Cr_2Ti_2O_7$ Powders by the Citrate Gel Process P. Sujatha Devi 345

The New Phosphates $Ln_{1/3}Zr_2(PO_4)_3$ (Ln = Rare Earth) M. Alami Talbi, R. Brochu, C. Parent, L. Rabardel, and G. Le Flem 350

Structure Deformations and Existence of the α–β Transition in MXO_4 Quartz-like Materials E. Philippot, A. Goiffon, A. Ibanez, and M. Pintard 356

Preparation and Structure of Cerium Titanates Ce_2TiO_5, $Ce_2Ti_2O_7$, and $Ce_4Ti_9O_{24}$ Andreas Preuss and Reginald Gruehn 363

Polarized Optical Absorption Spectroscopy of the $Tl_2MnF_5 \cdot H_2O$ 1D Manganese (III) Single Crystal F. Rodríguez, P. Nuñez, and M. C. Marco de Lucas 370

The Crystal Structure of a New Borogermanosilicate $Nd_3BGe_{1.08}Si_{0.92}O_{10}$ K. Serhan, M. Taibi, J. Aride, A. Boukhari, J. Darriet, and G. Le Flem 384

Preparation and Properties of $BaCuO_{2.5}$ and Its Related Oxides Wu Mingmei, Su Qiang, Hu Gang, Ren Yufang, and Wang Hongyiang 389

BRIEF COMMUNICATION

Electronic Structures of Perovskite Oxides of Transition Metals of the Type $LaMO_3$ (M = Ti–Ni) as Revealed by MSXα Investigations D. D. Sarma, A. K. Santra, and C. N. R. Rao 393

AUTHOR INDEX FOR VOLUME 110 402

NOTICE

The Subject Index for Volume 110 will appear in the December 1994 issue as part of a cumulative index for the year 1994.

Digitized by the Internet Archive
in 2026

https://archive.org/details/journal-of-solid-state-chemistry_1994_110_contents

Information for Authors

The *Journal of Solid State Chemistry* is a research journal devoted to the chemical, structural, thermodynamic, electronic, magnetic, and optical properties and processes of solids. Theoretical and experimental contributions are both welcome. Critical reviews are occasionally presented in selected rapidly developing fields. The journal also carries a Letters Section.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Solid State Chemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscripts may be presented as articles (i.e., conventional full-length expositions), or notes (brief rapid communications of important new work) which are limited to 1200 words. English, French, and German are the official languages of the Journal but submission of articles in English is encouraged. Manuscripts should be submitted to *Journal of Solid State Chemistry*, Editorial Office, 525 B Street, Suite 1900, San Diego, California 92101-4495.

Manuscripts should be submitted in quadruplicate—double-spaced on one side of 21.5 × 28 cm paper. Headings of major sections should be typed in capital letters and centered on the page. Each page of the manuscript should be numbered. Page one should consist of the manuscript title, the author's name, and the author's affiliation. For multiple authors, the author to whom correspondence is to be addressed should be indicated. Page two should consist of an abstract (50–150 words) suitable for use in *Chemical Abstracts*. The American Chemical Society's *Style Guide* or the *Style Manual* of the American Institute of Physics should be followed regarding matters of style and abbreviation.

Tables. Tables should be numbered with Arabic numerals in a sequence corresponding to the order of citation in the text. Footnotes to tables are to be placed directly below the table and should be indicated by superscript, lowercase *italic* letters. Tables longer than two manuscript pages should be submitted as clear, sharp glossy photographs. They will be reproduced by photoreproduction and should be designed to fit the Journal page after 50% reduction in each dimension. Errors in such tables cannot be corrected in proof.

Auxiliary Material. In lieu of publication, unusually long tables and sequences of repetitive figures must be deposited with the National Auxiliary Publications Service (NAPS).

For material to be deposited, a deposit fee of $25.00 for up to 98 pages of standard-size or 49 pages of oversize deposited material is to be paid by the authors to NAPS. Appropriate transmittal forms to accompany the deposited material are supplied to the authors by the Editor at the time a paper is accepted for publication. The following footnote (wherein missing numbers are to be inserted by the author in page proof) should be used to reference deposited material.

See NAPS document No. ___ for ___ pages of supplementary material. Order from ASIS/NAPS. Microfiche Publications, P.O. Box 3513, Grand Central Station, New York, NY 10163. Remit in advance $4.00 for microfiche copy or for photocopy, $7.75 up to 20 pages plus $.30 for each additional page. All orders must be prepaid. Institutions and Organizations may order by purchase order. However, there is a billing and handling charge for this service of $15. Foreign orders add $4.50 for postage and handling, for the first 20 pages, and $1.00 for additional 10 pages of material, $1.50 for postage of any microfiche orders.

Figures. Figures should be submitted as glossy prints or as original black ink drawings, no larger than 21.5 × 28 cm. Press type is not acceptable. It is important that lettering on drawings be done with a lettering set and be planned to fit the proportion of the printed page (7⅛ × 9 in.). Lettering on the original should be large enough to be legible after reduction of the figure to single-column width (3.5 in.). The difference in type size within a figure should be no more than approximately 15%. The caption of each axis should be lettered parallel to its axis. Background grids should not be included. For halftone reproductions, glossy, high-contrast, black and white prints should be submitted. Illustrations in color can be accepted only if the authors defray the cost. Each figure should be identified on the back with the author's name and figure number. Figures are to be cited in the text by consecutive Arabic numerals. Figure captions should be typed as a list on a separate page.

Equations. Equations should be typewritten or clearly handwritten with an Arabic number if necessary for reference placed in brackets to the right of equation. Reference to equations should use the form "Eq. [3]."

Footnotes. Footnotes to the text should be indicated by consecutive superscript numbers and listed on a separate page at the end of the paper.

References. References should be cited in the text by consecutive Arabic numbers in parentheses. The references must appear on a separate sheet, listed in numerical order, i.e., in accordance with order of citation in the text. After the reference number, the author's initials, last name, journal name, volume, initial page number, and year (in parentheses) should be listed in that order. Abbreviations for journal names should follow the

style of the latest *Chemical Abstracts Service Source Index*. For book references, give the author's name, name of book (in quotes), Editor's name (if any), edition (if other than the first), chapter or page number, publisher's name, place and year of publication.

Manuscripts Dealing Primarily with Single-Crystal Structure. The *abstract* should contain the chemical formula, crystal system, and space group (Hermann–Mauguin symbol), lattice constants with esd's, Z, and significant structural features.

The *experimental* section should contain the following information in as brief a form as possible: chemical formula, source of material and its color, lattice constants with esd's, wavelength of the radiation used in their calculation, temperature at which they were measured, type of filter or monochromator, possible space groups (and method of distinguishing between groups with the same absences), Z, crystal dimensions, absorption coefficient, method of correcting for absorption, type of data collection, number of reflections measured, number of independent reflections, and agreement factors between multiply measured or equivalent reflections. The description of the structure determination and refinement should indicate a brief outline of the method used, sources of f, $\Delta f'$, and $\Delta f''$, final R factors (weighted and unweighted), the function minimized in refinement, the form of weights in the refinement, and the extinction correction (if applied).

Structural results should contain a description of the structure and the following tables: a table of all atomic coordinates (with esd's) and important bond distances and angles (with esd's). In those structures where atomic displacements or atomic motion is important (ionic conductors, superlattice structures solved as a substructure, phase changes, etc.), it may be appropriate to add a table of anisotropic temperature factors. When submitting a manuscript three copies of a listing of h, k, l, F_o, F_c (σF_o is optional) must be provided for the reviewers and also, if not included in the manuscript, three copies of a table of temperature factors. Authors are strongly encouraged to deposit with NAPS structure factor tables, tables of anisotropic temperature factors, all nonessential bond distances and angles, and other supporting structural detail; such material will be retained in the *Journal's* editorial office for no longer than one year after publication of the article.

Letters to the Editor. Letters to the Editor will be accepted for publication subject to approval by the communicators, who upon their recommendation for acceptance will forward the manuscript directly to the Editorial Office. Each article should indicate clearly the novelty and urgency of the contribution; it may be helpful to document this more explicitly in an accompanying letter of transmittal. Each communicator must satisfy himself that the content is not only scientifically sound, but also likely to have such impact as to merit rapid publication. Accepted manuscripts will be published on an accelerated publication schedule. The author will not receive proofs for correction; it is the responsibility of the author to ensure that the manuscript as submitted is free of typographical or substantive errors. Letters should be no longer than 1200 words, with an absolute minimum of figures, tables, and references; an abstract not exceeding 150 words should also be provided. Manuscripts should be sent to the Editor, an Associate Editor, or to one of the following members of the Editorial Advisory Board: E. F. Bertaut, J. B. Goodenough, P. Hagenmuller, C. N. R. Rao, or A. Wold. Full addresses for these Board members are listed on the inside front cover of the journal.

Book Reviews. Book Reviews are published on an irregular schedule, and are limited to books whose content bears directly on the general area of solid state chemistry. Reviews should be submitted directly to the Editor for Book Reviews, Dr. Edward Kostiner, Department of Chemistry and Institute of Materials Science, University of Connecticut, Storrs, Connecticut 06268.

Proofs. Unfolioed page proofs will be sent directly to the author from the printer together with order forms for reprints. There is no page charge.

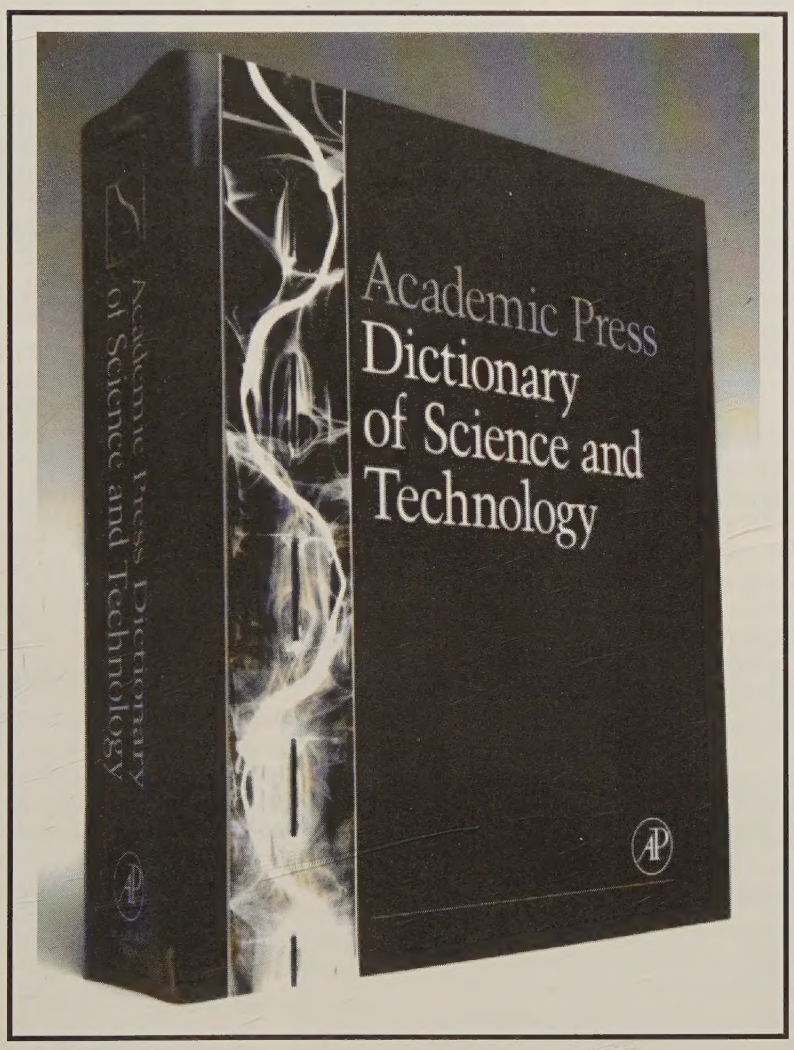
Personal Computer Disks. Manuscripts may be submitted to *Journal of Solid State Chemistry* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing disks for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, Inc., 525 B Street, Suite 1900, San Diego, California 92101-4495; telephone: (619) 699-6415; fax: (619) 699-6800).

The New Standard of Excellence.

The most comprehensive, authoritative scientific dictionary now available, the **Academic Press Dictionary of Science and Technology** offers you, in one volume, the largest collection of scientific terms available in any single reference source. Containing complete, practical definitions for 133,000 words (not counting abbreviations), the **Dictionary** covers key terminology in 124 fields of science and technology—including Molecular Biology, Computer Science, Physics, Engineering, Chemistry, Ecology, Behavior, Geophysics, Veterinary Science, Mathematics, Astronomy, Biotechnology, and numerous other fields.



September 1992, 2432 pp., $115.00/ISBN: 0-12-200400-0

CALL TOLL FREE 1-800-321-5068 or FAX 1-800-336-7377

Prices subject to change without notice. ©1993 by Academic Press, Inc. All Rights Reserved. LK/CEP/MEH/ST—41013.

Key Features Include

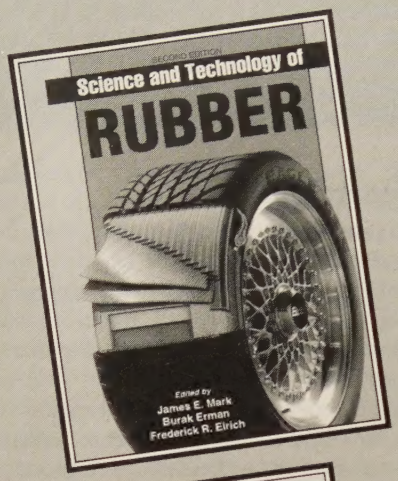
- 133,000 fully-defined entries—more than any other scientific dictionary
- Complete coverage of 124 fields of science ranging from Acoustics to Zoology
- Single volume, large 8½" x 11", double-column format for easy access
- Cutting-edge definitions in such dynamic fields as Artificial Intelligence and Biotechnology
- More medical terms than any other general scientific dictionary now available
- More coverage of subfields of medicine, including rapidly growing disciplines such as Oncology, Radiology, Hematology, Cardiology, and Toxicology
- More than 2000 detailed illustrations and technical photographs, including 24 pages of color plates
- Pronunciation guides for difficult or phonetically irregular terms
- Complete appendix of frequently consulted scientific data, including the periodic table, standard weights and measures, and a Chronology of Science

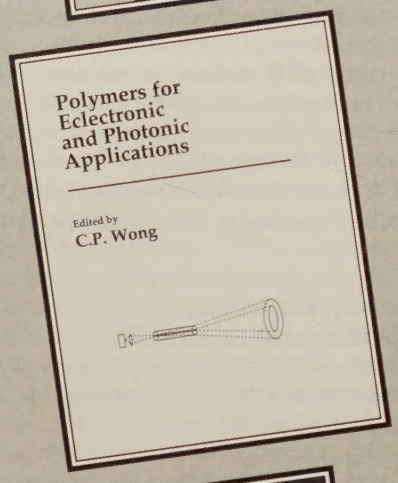
Another distinctive feature of the **Dictionary** is its 124 "Windows." These boxed essays are written by leading scientists in the field, such as Michael DeBakey, Stephen Jay Gould, Joshua Lederberg, Arthur Kornberg, Linus Pauling, Roger Revelle, and Rosalyn Yalow, each of whom offers a brief introduction to his or her area of expertise. Presenting practical, concise information on each discipline, the "Windows" help make the terminology easier to understand.

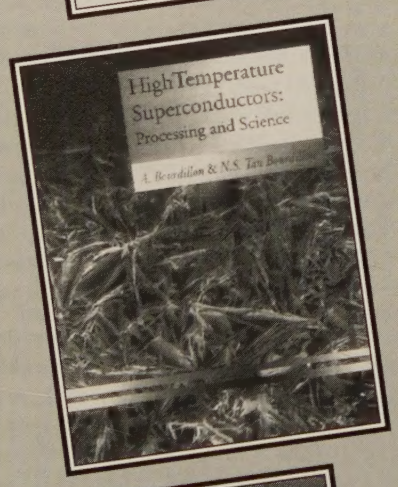
The Only Source You Need for Scientific Terminology

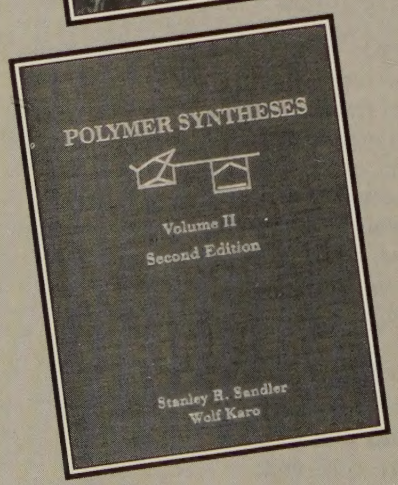
If your library, institution, or corporation serves practicing scientists and professionals in any scientific field—engineers, computer professionals, and other technical personnel; high school, college, and graduate students; writers, researchers, and educators working with a scientific vocabulary; or general readers interested in science—then the **Academic Press Dictionary of Science and Technology** is the only scientific dictionary you need. The definitions are clear and accessible to the non-specialist, yet provide all the technical information the specialist requires.

Set a new standard of excellence by adding the **Academic Press Dictionary of Science and Technology** to your reference collection.
It will become your reference of choice.









MATERIALS for Your Polymer Research

SCIENCE AND TECHNOLOGY OF RUBBER

SECOND EDITION

Edited by

James E. Mark, Burak Erman, and Frederick R. Eirich

Reviews of the First Edition

"The book provides a good and well presented text for the science of rubbery polymers."

—CHEMISTRY & INDUSTRY

"The whole volume is well referenced and indexed....I am not aware of any other single text which covers the scope of rubber chemistry and physics so fully at degree and post-graduate level. Certainly there is not one so generally up to date."

—RUBBER DEVELOPMENTS

Science and Technology of Rubber, Second Edition provides a general survey of elastomers and an examination of rubberlike elasticity, with an emphasis on a unified treatment, ranging from physical theory to final applications. Researchers in polymer science and engineering fields will find coverage of recent advances, unsolved problems and projections, and processing.

May 1994, c. 718 pp., $85.00 (tentative)/ISBN: 0-12-472525-2

POLYMERS FOR ELECTRONIC AND PHOTONIC APPLICATIONS

Edited by

C.P. Wong

This book provides in-depth coverage of photoresists for microlithography, microelectronic encapsulants and packaging, insulators, dielectrics for multichip packaging along with electronic and photonic applications of polymeric materials, among many other topics.

1992, 661 pp., $99.95/ISBN: 0-12-762540-2

THERMAL CHARACTERIZATION OF POLYMERIC MATERIALS

Edited by

Edith A. Turi

1981, 972 pp., $169.00/ISBN: 0-12-703780-2

POLYMER SYNTHESES

Volume II

SECOND EDITION

Stanley R. Sandler and Wolf Karo

A Volume in the ORGANIC CHEMISTRY Series

A Review of **Polymer Syntheses, Volume I, Second Edition**

"The amount of information provided by this volume is extraordinary: more than 1750 literature citations are included.... The book is a valuable source of fundamental and practical information regarding methods of polymer synthesis and is recommended for both personal and library purchase."

—JOURNAL OF THE AMERICAN CHEMICAL SOCIETY

This revised and updated Second Edition presents detailed laboratory instructions for the preparation of various polymers. It is an indispensable guide for industrial and academic chemists as well as for students in the field.

January 1994, 427 pp., $99.95/ISBN: 0-12-618512-3

HIGH TEMPERATURE SUPERCONDUCTORS

Processing and Science

A. Bourdillon and N.X. Tan Bourdillon

This text provides an introduction to superconductivity, with an emphasis on the state-of-the-art methods used to process these complex materials. The coverage is complete, with chapters on characterization and applications—both achievable and realized. The book will appeal to physicists and chemists involved in the synthesis of compounds and specimens, as well as to engineers and applied scientists looking for ways to utilize these remarkable materials.

January 1994, 288 pp., $70.00/ISBN: 0-12-117680-0
